

Responsibilities of the Care Coordinators, Staff Nurses, Counselors and Medical Officers

Care Coordinators, Staff nurses, Counselors and Medical Officers will screen patients for the 4 symptoms of TB i.e. cough, weight loss, night sweats and fever. If the patient has one or more symptoms, his/her sputum will be sent for CBNAAT testing.

Following CBNAAT testing, if the patient has been identified as an active TB patient then care coordinators, staff nurses, counselors and medical officers will provide initial counseling to patients and do the necessary paperwork.

Do not forget to tell the patient!

Take medicine daily and follow the arrow marks when taking medicine

Visit the hospital on the day of completing the 28th dose of the TB medication

Field staff will make a home visit and/or call the patient to ensure adherence and offer counseling

Patient confidentiality will be maintained and the patient phone numbers will not be shared

Responsibilities of the Pharmacist

The pharmacist will dispense 99DOTS wrapped medication to the patients. He/She will also keep track of the medicine inventory and educate patients.

In the rectangular empty box on the envelope, the pharmacist will write the number of pills the patient must take every day.

NOTE: At times, in the 3 pill and 5 pill pack a single dose can span across more than one blister pack. In that case, patients can call any one of the number revealed for that dose from the new blister pack.

Responsibilities of the Data Manager

Data Manager will register the patient in the **NIKSHAY** website. He/She has to make sure to enter all phone numbers of a patient and to keep them updated.

What is 99DOTS?

It is a technology which uses phones (mobile/landline) to make TB treatment more convenient for patients, field staff/supervisors and program officers. It helps ensure that TB patients make a full recovery. It enables patients to take their medication and document their dose taken by making a free phone call from anywhere and at anytime.

Home / office /
Anywhere

Benefits of 99DOTS

Patients – *Less travel and increased convenience*

Field staff/Supervisors – *Focused and more efficient care*

Program Officers – *Easy monitoring and accurate reports*
